Recollection Wisconsin: Implementing Standardized Rights Statements
Recollection Wisconsin is adopting the standardized rights statements developed by DPLA and Europeana. The twelve statements, available at RightsStatements.org, are a simple, universal way to communicate the copyright and re-use status of digital objects to the public. In the future, all metadata records provided to DPLA will be required to carry either a standardized rights statement URI or a Creative Commons license URI.

Copyright status of resource	Rights Statement URI
In copyright	http://rightsstatements.org/vocab/InC/1.0/
Not in copyright *(in the public domain in the United States)*	http://rightsstatements.org/vocab/NoC-US/1.0/
Copyright undetermined *(you've researched the copyright status but are unable to make a definitive determination)*	http://rightsstatements.org/vocab/UND/1.0/

Dublin Core mappings for rights metadata

dc:rights (REQUIRED)	Rightsstatements.org URI *or* Creative Commons license URI (not both)	Displayed in DPLA Standardized Rights Statement field.
dcterms:rightsHolder (OPTIONAL)	A person or organization owning or managing rights over the resource.	Displayed in DPLA Rights field
dcterms:accessRights (OPTIONAL)	Information regarding access or restrictions based on privacy, security, or other policies.	Displayed in DPLA Rights field

"Local" rights statements
This data may remain in local records but should *not* be in the OAI feed provided for metadata harvesting. Local rights metadata should not contradict the standardized statement (e.g., a resource with a "not in copyright" statement should not have local rights information that says "This image may not be reproduced without the permission of the xx library.") .

Local field (no DC map - not harvested) (OPTIONAL)	Natural-language version of standardized Rights Statement	Not displayed in DPLA
Local field (no DC map - not harvested) (OPTIONAL)	Boilerplate-type language e.g. statement on Fair Use, link to a general institutional copyright statement, contact information for reproductions, etc.	Not displayed in DPLA
